

Cathedral Inception

Jan 12th, 2004

Jason (4.8 yrs.) has found another book on architecture that contains a photograph of a building he would like to construct. The photograph is of Saint Patrick's Cathedral in New York City.

Materials are quickly chosen with a little guidance and a version of the cathedral takes shape. We look at a new method of joining pieces of cardboard using 'twist' ties.

The structure is painted white and left to dry.

What do you think is inside this Cathedral?

Jason shrugs.

Let's find some pictures of the inside on the internet.

When the images of the grand interior appear Jason is clearly astounded.

"Oh my gosh!"

We print the images and store them for the next visit and Jason moves on to another interest.
